# KeyOS MultiPass™ Service

## Carrier-Class, Studio-Approved Content Security Platform

BuyDRM's content security platform, KeyOS, is a SaaS DRM platform which is operated using both managed hosting and cloud infrastructures. The platform components encompass the full spectrum of DRM requirements including, forensic watermarking, content encryption technologies, rights policy creation and enforcement, license key delivery services and secure content playback. KeyOS represents the evolution of several decades of commercial content security deployments and supports a wide ecosystem of encoders, servers and players.

## KeyOS MultiPass Service: Self-Serve Multi-DRM Service Platform

Based on our award-winning KeyOS Platform, the MultiPass Service is a “pay-as-you-go” version of the KeyOS MultiKey Service. Subscribers to the service receive a license to the KeyOS Encryption technologies and access to the MultiKey licensing gateway where they can deliver license keys to all compatibles playback platforms using today's most popular DRMs. The MultiPass Service provides all the necessary DRM technologies to fulfill baseline studio requirements while still being cost-effective and flexible. This service is aimed for event-based organizations that do not expect to distribute their content to more than 20,000 end users per month e.g. Small Business, Specialized Education Organizations, Medical Organizations, Religious Organizations, etc.

**DRM is now one of a handful of technologies that are required by the major US studios, networks and media operators to be used as part of their content licensing agreements.**

### MultiPass Steps to Deploy
