# Mostly Music Selects BuyDRM to Secure Premium Music Experiences

*Offering includes MultiKey DRM Service and MultiMark Watermarking Server*

**Austin, Texas, April 7th, 2026** — BuyDRM™, a leading provider of content security services for premium video, announced today that Mostly Music, a dynamic music streaming and live event distribution platform, has selected BuyDRM as their content security partner.

Mostly Music is using the MultiMark watermarking server to embed forensic watermarks into video content and the MultiKey service to encrypt the watermarked video content. This “every stream unique” approach is proven to protect valuable live and on-demand video content across all supported devices while revealing potential pirating of the content and the source of the piracy.

The MultiKey DRM service will also provide support for concurrency detection, key rotation, multiple key encryption and license releasing. These four advanced features of the MultiKey DRM service provide additional safeguards to further ensure premium content is being consumed by valid users and to further deny pirates access to the content.

BuyDRM’s pedigree in the content security industry spans decades, delivering commercial digital rights management (DRM) and forensic watermarking solutions that meet the highest studio, label, and broadcaster security requirements. Leading entertainment brands rely on BuyDRM to help safeguard their premium content and to deter piracy at scale through combined watermarking and DRM technologies.

Protecting high value video content, especially exclusive live performances and premium catalog content, requires robust security technologies that ensure content owners and fans benefit from a seamless, secure experience without compromising quality or accessibility.

“Ensuring that our content is experienced exactly as intended, without unauthorized distribution or leakage, is essential to our mission and our relationships with record labels and performers,” said Mayer Werdeger, CEO at Mostly Music. “BuyDRM’s MultiMark Watermarking Server gives us confidence that every encrypted stream carries unique forensic identifiers, enabling us to protect and trace our content in the event of misuse.”

“Forensic watermarking applied just-in-time with DRM represents the highest level of content security available today,” said Christopher Levy, CEO & Co-Founder of BuyDRM. “Mostly Music understands the importance of safeguarding valuable content and we are proud to support their secure content delivery strategy with our industry-leading platform KeyOS.”
